INDEX OF EASTERN REGION TECHNICAL ATTACHMENTS 1969 THRU 1980

01 FEB 1981

Here is a complete listing of all the Technical Attachments issued by the Eastern Region during the years 1969 thru 1980. Many of these will be available on station. Please contact SSD if there are any of interest which are not available. We can provide a copy or describe the contents over the phone.

<u>Reg. Outlook</u> <u>Date</u>	<u>Title of Technical Attachment</u>	<u>T.A. No.</u>
1/6/69	Evaluation of SAM PoP Forecasts by Field Stations Utilization of the Six-Hourly Output of the P.E. Model (FOUS-1)	* *
1/27/69	An Evaluation of the Use of 1000-500 mb Thickness Forecasts in the Prediction of Rain vs. Frozen Precipitation at Williamsport, Pa.	*
2/3/69	Mean Absolute Error (MAE) (°F) of Indicated Tem- perature Forecasts	*
2/24/69	National Capital Area - 1968 Annual Network Sum- mary	*
3/3/69	Skill of the Sub-Synoptic Advection Model in Prob- ability of Precipitation Forecasting Synopsis East Coast Snowstorm February 9-10, 1969	* *
3/10/69	A Unique Characteristic of Major East Coast Snow- storms Rain-Snow Discrimination with the P.E. Model	* *
4/1/69	Some Interesting Points on Waves and Swell	*
4/7/69	Digitized Satellite Picture Mosaics	*
4/14/69	Relative Humidity and Change in Relative Humidity as Predictors of Precipitation	*
4/21/69	Utilization of Satellite Pictures	*
5/5/69	Satellite Infra-Red Spectrometer	*
5/12/69	Boston's Heaviest Snowstorm on Record	*

*Technical Attachments were not assigned numbers until 1971.

<u>Reg. Outlook Date</u>	<u>Title of Technical Attachment</u>	<u>T.A. No.</u>
5/20/69	FOFAX Trajectory Chart Radar Beam Distortion and the Hook Echo Verification Results for March 1969	* * *
5/26/69	Forecasting Precipitation Probability During Summer Months Using P.E. Forecast Parameters of Mean Relative Humidity and Vertical Velocity	*
6/3/69	SAM/PE Verifications of PoP Forecasts	*
6/23/69	Verification of 12- and 24-Hour PE Mean 1000-500 MB Relative Humidity Forecasts	*
7/7/69	Conditional Climatology Study at WBO Philadelphia, Pa.	*
7/14/69	Objective Cloud Cover Forecasting	*
7/28/69	Flash Flood Statements and Bulletins	*
8/4/69	Metroweather Newsmap	*
8/18/69	Synoptic and Radar Evaluation of 7/4/69 Severe Weather in Northern Ohio	*
9/8/69	Comparative SAM/PE PoP Verification Program at WBFO Raleigh WBFO New York Metroweather Newsmap	* *
9/15/69	Some Thoughts on the Use of ATS Data to Improve Short Range Forecasts	*
9/22/69	National Facsimile Radar Summary Charts--A New Look (Taken from Central Region Technical Attachment)	*
9/29/69	NMC Quantitative Precipitation Forecasts (QPF) and Verification	*
10/6/69	On the Compatibility of Radar Analysis in Conjunction with Sub-Synoptic Analysis	*
10/20/69	SAM/PE and Station PoP Forecast Verification Program at WBO Albany, N.Y.	*
11/3/69	Reception of APT Pictures Transmitted on FOFAX	*
11/17/69	Quantitative Precipitation Forecast (QPF) Verification Scores	*

<u>Reg. Outlook Date</u>	<u>Title of Technical Attachment</u>	<u>T.A. No.</u>
12/8/69	A Study of Klein Temperature Forecasts for Charleston, S.C., 9/68 to 4/69	*
12/15/69	Frequency and Duration of Radiation Type Fog at Wilkes-Barre Scranton Airport, Pa.	*
2/2/70	Preliminary Results of Relationships between Relative Humidity and Vertical Velocity Predictions in the New PE Laminated Moisture Model and the Frequency of Observed Precipitation	*
2/10/70	Air Pollution Potential Verification Special Radar Reporting Procedures in the Southern Region	* *
2/16/70	Examples of Turbulence Associated with Thunderstorms and Related Radar Echoes	*
3/2/70	Radar Beam Distortion and the HOOK Echo (Extracted from Central Region Staff Notes)	*
3/9/70	Use of NMC 36-hr. 1000-500 MB Thickness Forecasts in Predicting 36- to 48-hr. Precipitation Type	*
3/16/70	Line Echo Wave Pattern in Northern Ohio, 7/4/69	*
4/6/70	Metroweather Newsmaps of Easter Sunday Snowfall	*
4/20/70	Use of 6-Hourly PE Quantitative Precipitation Forecasts as an Aid Determining Probability of Precipitation for New York City, N.Y. Objective Forecasts from PE Output (Western Region Staff Notes of 3/24/70)	* *
5/18/70	Known Flash Flood Occurrences in the ER	*
5/25/70	Heavy Snow Verification 1968-1969 & 1962-1969	*
6/1/70	Sounding the Atmosphere from Satellites (from CR Staff Notes, 5/70)	*
6/22/70	The First Month of Klein Forecasts as NMC Temperature Guidance An Important Severe Weather Incident in 6/70	* *
7/6/70	Case Study of Large Errors in the PE Max/Min Temperature Forecasts (Klein)	*

Reg. Outlook Date	Title of Technical Attachment	T.A. No.
7/13/70	The Frequency and Duration of Low Ceilings at Charlotte, N.C., during the Period 1960-1968	*
7/27/70	Heavy Snow Verification 1969-1970	*
8/10/70	A Case Study Illustrating the Utilization of 6-Hourly PE Predictions of Relative Humidity by Layers in Cloud Forecasting	*
9/14/70	The Use of PE Model Predictors in Forecasting Lake Effect Wintertime Post Cold Frontal Precipitation at Erie, Pa.	*
10/5/70	July-August 1970 Verification of PE Model Precipitation Forecasts for Columbia, S.C.	*
10/12/70	Probability of Getting at Least one Flash Flood per Month in the Susquehanna & Delaware Basins	*
10/19/70	Use of PE Model Output to Forecast Winter Precipitation in the Northeast Coastal Sections of the U.S.	*
10/26/70	Forecasting Winter Weather	*
11/2/70	An Application of the Younkin Method in Forecasting Snow at Greer, S.C.	*
11/9/70	Systematic Depiction of Numerical Forecasts	*
11/16/70	Objective Procedure of Identifying Threat of Wintertime Heavy Precipitation Situation along the Northeast Coast	*
11/30/70	Use of 6-Hourly PE Forecasts in Predicting Precipitation Type	*
12/7/70	Objective Scheme for Forecasting the Ending of Radiation Fog at Columbia, S.C.	*
1/25/71	Verification of SAM Forecasts at Albany	71-1-25
1/25/71	New NWP Limited Fine Mesh Model	71-1-25(B)
2/8/71	Verification of Probability Forecasts	71-2-8(A)
2/8/71	Comparative Skill of Objective PoP Forecasts Derived from 6-Hourly PE Forecasts in FOUS-1 Message.	71-2-8(B)

Reg. Outlook Date	Title of Technical Attachment	T.A. No.
2/16/71	Evaluation of PE Categorical Precipitation Forecasts for Philadelphia	71-2-16
2/22/71	Prediction of Summertime Cloud Ceilings at Boston, Mass.	71-2-22
3/1/71	Status Reports on the Radar Summary Charts	71-3-1(A)
3/1/71	A Mesolow with Snow	71-3-1(B)
3/22/71	Comparative Skill of Objective PoP Forecasts (FOUS 3) Derived from 6-Hourly PE Forecasts	71-3-22
4/15/71	Objective Forecasting of PoP for Wilkes-Barre Scranton, Pa., using PE Model Predictors	71-4-5
4/19/71	Time Cross-Section Depicting Forecast and Observed Weather	71-4-19
5/24/71	Preface--Applications of Infrared Meteorological Satellite Data	71-5-24
5/10/71	Interpolation Procedures used in Deriving the FOUS 1/2 Data	71-5-10
5/3/71	Gearing Up for Warm Season Weather	71-5-3
6/28/71	Preface--The Science of Rainmaking	71-6-28
6/21/71	A Relationship between Snow Accumulation at Albany, N.Y. and Snow Intensity as Determined from Visibility	71-6-21
6/14/71	Use of PE Model Output to Forecast Summertime Precipitation in the Eastern Region of the United States	71-6-14
7/26/71	Trends in Precipitation Forecast Accuracy at Boston, Mass.--Wintertime (December thru March) 1954 thru 1971	71-7-26
7/19/71	A Brief Look at the "SAM" Forecast Surface Winds at Columbia and Charleston, S.C. for July and August of 1970	71-7-19
1/5/72	The Performance of LFM Model Precipitation (occurrence) Forecasts--November 1971	72-1-5
1/17/72	Forecasting Freezing Rain	72-1-17

<u>Reg. Outlook Date</u>	<u>Title of Technical Attachment</u>	<u>T.A. No.</u>
1/31/72	Communications--Challenge for the Future	72-1-31
2/22/72	A Possible Use of the LFM	72-2-22
2/7/72	Relationship between Snow Cover and the Occurrence of Temperatures less than or equal to 0°F at Williamsport, Pa.	72-2-7
2/28/72	Preliminary Statistics Relating to Winter Performance of LFM Forecasts for Selected ER Stations	72-2-28
3/6/72	A Relationship between Observed K-Index Values and the Frequency of Occurrence of Precipitation at Wilkes-Barre, Scranton, Pa.	72-3-6
3/13/72	Thermal Parameters as a Predictor of Precipitation Type	72-3-13
3/20/72	Preliminary Evaluation of LFM Predictions of Thickness and Precipitation	72-3-20
3/27/72	Bias of Numerical Models	72-3-27
4/24/72	A Relationship between Observed K-Index Values and the Frequency of Precipitation at Pittsburgh, Pa.	72-4-24
5/1/72	How "Good" is a Forecast?	72-5-1
5/5/72	Interpretation of the 6-Hourly PE Model Output (FOUS 1/2)	72-5-8
5/15/72	Effects of the Urban Heat Island upon Meteorological Parameters	72-5-15
5/30/72	WBRR Picture Quality Control	72-5-30(A)
5/30/72	Probability of Precipitation Derived from Primitive Equation and Trajectory Model Output Statistics (PEAT MOS)	72-5-30(B)
7/17/72	An Initial Investigation of PEAT MOS Probability of Precipitation vs. Klein Temperature Error	72-7-17
7/24/72	Forecast Decision Information	72-7-24
7/31/72	Performance of the Limited Area Fine Mesh (LFM) Model in the Forecasting of Precipitation at Charleston, W. Va.	72-7-31

<u>Reg. Outlook Date</u>	<u>Title of Technical Attachment</u>	<u>T.A. No.</u>
8/7/72	PoP Forecast Competition	72-8-7
8/14/72	Results of Heavy Snow Forecast Verification--Winter 1971-1972	72-8-14
9/11/72	WBRR Pictures	72-9-11
10/10/72	Trajectory Model Forecasts as an Aid in Predicting Low Cloud Ceilings	72-10-10
10/16/72	The Relationship between Average Annual Rainfall and Elevation of Terrain in Northwestern South Carolina during the Period 1962 and 1971	72-10-16
10/30/72	Observed "K" Values vs. Precipitation at Philadelphia, Pa., for the Period May 1 - September 30, 1972	72-10-30
11/6/72	Use of Trajectory Model Predictions of "K" Value and 850 mb Net Vertical Displacement in the Prediction of Precipitation	72-11-6
11/13/72	Use of Trajectory Model Output as an Aid in Forecasting Low Ceilings at Boston	72-11-13
12/11/72	Forecast Family's Black Sheep	72-12-11(B)
12/11/72	Precipitation Type as a Function of Observed Thermal Parameters at Greensboro	72-12-11(A)
12/18/72	Forecasting Type of Precipitation	72-12-18
1/15/73	Forecasting Low Ceilings at Boston	73-1-15
2/15/73	PE Model QPF Versus Frequency of Measurable Precipitation in the Winter at Pittsburgh, Pa.	72-2-5
3/12/73	Availability of Narrative Description of Current Satellite Information	73-3-12
4/9/73	The Effect of Varying the Probability Threshold for Mentioning Precipitation in the Body of the Forecast	73-4-9
4/16/73	Forecasting Type of Wintertime Precipitation at Wilkes-Barre/Scranton, Pa.	73-4-16
4/30/73	Relationship between Observed and Geostrophic Surface Winds Off the Main Coast during the Fall and Winter	73-4-30

Reg. Outlook Date	Title of Technical Attachment	T.A. No.
5/7/73	Use of Digitized Radar Data in Flood Situations	73-5-7
5/21/73	Devising a Strategy to Select the Best Forecast of Precipitation Probability among Several	73-5-21
5/28/73	Integrating and Displaying Objective Guidance to Aid in its Assimilation	73-5-28
6/4/73	Operational Use of ATS-3 Satellite Pictures	73-6-4
6/18/73	ATS-3 Satellite Pictures Provide Information for Issuance of Severe Thunderstorm Warning	73-6-18(A)
6/18/73	The Use of LFM QPF to Improve PEATMOS PoP	73-6-18(B)
6/25/73	PE Model QPF as an Aid in Predicting Winter Precipitation at Buffalo, N.Y.	73-6-25
7/2/73	Radar Echo Tops Observations	73-7-2
10/1/73	Use of Digitized Radar (DR) Data in Heavy Precipitation Situations	73-10-1
10/9/73	Inference of Cloud-Top Information from DR Data	73-10-9
10/29/73	Trajectory Model Forecasts	73-10-29
10/15/73	Recognizing Threat of Hazardous Weather	73-10-15
11/26/73	Comparison of First Period (12-Hour) Temperature and PoP Forecasts: Wilmington, N.C. vs. Raleigh, N.C.	73-11-26
11/5/73	Satellite and Lake-Snow Meteorology	73-11-5
12/10/73	Skill of MOS Summer Surface and Forecasts for Philadelphia	73-12-10
1/7/74	Snow and Manually Digitized Radar (DA) Data	74-1-7(A)
1/7/74	The Relationship between Snow Cover and the Occurrence of Low Temperature	74-1-7(B)
1/14/74	Objective Modification of PEATMOS 1st Period Summer PoP Forecasts for Washington, D.C.	74-1-14
1/21/74	Objective First Period Forecast of Precipitation Amount	74-1-21
1/28/74	Evaluation of MOS Summer Temperature Forecasts for Charleston, W. Va.	74-1-28

Reg. Outlook Date	Title of Technical Attachment	T.A. No.
2/19/74	First Period PoP Modification	74-2-19
3/4/74	Bias of NMC Objective Surface Temp. Forecasts	74-3-4
4/1/74	The Role of Cumulus Convection in the Development of Extratropical Cyclones (Summary of Tracton's July 1973 MWR Paper)	74-4-1
4/22/74	Severe Weather Avoidance (From CRH T.A. 74-5, March 1974)	74-4-22
5/6/74	Digitized Radar Values as an Indicator of Hourly Precipitation	74-5-6
5/20/74	Using the LFM QPF to Modify First Period Winter PoP Forecasts in the Carolinas	74-5-20
6/3/74	Use of a Wave Recorder at WSO Wilmington, N.C.	74-6-3
6/12/74	Skill of MOS Winter Surface Wind Forecasts for Philadelphia	74-6-10
7/29/74	Relationship between Radar Echo Tops, the Tropopause and Severe Local Weather Occurrences	74-7-29
8/5/74	Evaluation of MOS Winter Temperature Forecasts for Charleston, W. Va.	74-8-5
9/3/74	A Field Use of GOES Pictures in Maintaining a Weather Watch	74-9-3
9/23/74	First Period Maximum Temperature Forecast Aids Derived for the Late Morning "Wilmington, N.C. and Vicinity Forecast"	74-9-23
9/30/74	A Fall and Winter Use of GOES Pictures	74-9-30
10/7/74	Forecasting Winter Morning Fog at Charleston, S.C.	74-10-7
10/21/74	Satellite Detection of Fog Development Along the South Coast of New England	74-10-21
12/9/74	A Secondary Use of LFM Progs	74-12-9(A)
12/9/74	Freezing Rain vs. Ice Pellets	74-12-9(B)
12/16/74	Performance of Numerical Guidance in Predicting Storm Related Precipitation	74-12-16

<u>Reg. Outlook Date</u>	<u>Title of Technical Attachment</u>	<u>T.A. No.</u>
1/6/75	Long Term Trends in the NWS Ability to Forecast Heavy Snow Events	75-1-6
1/13/75	Satellite Assist in Detection of Low-Level Turbulence	75-1-13
4/7/75	Trajectory Model Predictions of 700 mb Parcel Net Vertical Displacement as an Indicator of Precipitation Amount	75-4-7
4/28/75	Limitation of Operationally Available Infrared SMS-1 Satellite Imagery in Thunderstorm Detection	75-4-28
5/19/75	A Case of Satellite Photos Leading to an Early Revision of Heavy Snow Warnings	75-5-19
6/16/75	Satellite Pictures Assist in Quick Detection of Rapid Severe Weather Development	75-6-16
6/30/75	Merging Cells as Viewed by Satellite	75-6-30
8/11/75	GOES Narrative in Lieu of Radar Narrative	75-8-11
8/18/75	The Relation of MOS PoP Forecasts from One Computer Run to the Next	75-8-18
9/2/75	Bulging Radar RHI Echoes of Convective Cells-- A Possible Severe Weather Indicator	75-9-2
9/22/75	Satellite Detection of Intense Convective Activity	75-9-22
10/14/75	Computer-worded Forecasts	75-10-14
11/3/75	Use of Satellite Information in Observing and Forecasting Fog Dissipation and Cloud Formation	75-11-3
11/17/75	Estimating Heights of Cirriform Clouds	75-11-17
11/24/75	The Skill of the National Meteorological Center's Six-Hour Maximum Precipitation Amount Forecasts	75-11-24
12/8/75	Satellite Pictures Displayed on Fujitascope Lead to Important Forecast Changes	75-12-8
1/12/76	NOAA-4 VHRR Pictures Received via the GOES Picture Distribution System: One Useful Field Application	76-1-12

<u>Reg. Outlook Date</u>	<u>Title of Technical Attachment</u>	<u>T.A. No.</u>
1/19/76	Some Limitations of IR Satellite Imagery	76-1-19
2/17/76	An Application of Enhanced Infrared Satellite Pictures	76-2-17
3/15/76	Relationship between PoP in a Twelve-Hour Period and PoPs of the Component Six-Hour Period	76-7(A)
3/15/76	Enhanced IR Helpful in Spotting Precipitation Areas One Case Study	76-7(B)
3/29/76	A New Marine Service Capability within NOAA!	76-8
4/12/76	A Case Study of LFM Guidance for an Intense Winter Storm in the Northeastern United States	76-9
4/26/76	An Objective Wave Forecasting Technique	76-10
5/10/76	A Satellite View of a Positive Vorticity Advection Induced Squall Line	76-11
5/24/76	Is the Minor Perturbations on an LFM Initial 500 mb Analysis Significant?	76-12
5/24/76	Tornado Associated with PVA Overtaking a Cold Front	76-12(B)
6/7/76	Tidal Fluctuations in New York Harbor during an Intense Storm	76-13(A)
6/7/76	Long Term Trends in the NWS Ability to Forecast Heavy Snow Events	76-13(B)
6/21/76	Barometric Pressure and Pressure Change	76-14
8/2/76	Verification of Flash Flood Watches in the E.R.	76-17
9/13/76	Verification of Flash Flood Watches in the E.R., Part II	76-20
11/8/76	Winter Temperatures and Snowfall at Central Park 1869-1976	76-24
12/6/76	Relationship between Tropopause Height and Severe Thunderstorm Tops	76-26
12/20/76	Satellite Photos Lead to Prediction of Snow	76-27

<u>Reg. Outlook Date</u>	<u>Title of Technical Attachment</u>	<u>T.A. No.</u>
2/14/77	Early vs. Final MOS Temperature Forecasts at Portland	77-4
2/28/77	Severe Weather of March 16, 1976 on the South Carolina Coast	77-5
3/14/77	Satellite Photos Help in Dust Episode in South Carolina	77-6
4/25/77	Displacement Error of Satellite Cloud Tops	77-9
5/9/77	Comparison of Early vs. Final MOS Temperature Guidance--Winter 1976-1977	77-10
5/23/77	Long Term Trends in the NWS Ability to Forecast Heavy Snow Events	77-11
7/5/77	Relationship between Manually Digitized Radar Data (MDR) Sums and Observed Precipitation in Long Duration Storms	77-14
9/12/77	Use of the LFM Model Predictions of Vertical Velocity in the Forecast of Precipitation at Columbia, S.C.	77-19(A)
9/12/77	Using Satellite Imagery to Detect Heavy Rain Potential	77-19(B)
11/21/77	Value of GOES Data in Recent Floods	77-24
12/5/77	Use of Enhanced Infrared Satellite Picture in Detecting Local Snow Producing Clouds	77-25
1/9/78	Overforecasting Hazardous Weather	78-1
6/5/78	How to Not Issue a Flash Flood Watch	78-10
6/12/78	Long Term Trends in the NWS Ability to Forecast Heavy Snow Events	78-11
7/31/78	Verification of Forecasts Made from the Thunderstorm Probability Nomogram for Washington, D.C.	78-14
9/20/78	Utility of the MOS 3-Hourly Temperature Forecasts	78-21
12/4/78	Precipitation from the LFM Boundary Layer?	78-22
3/12/79	An Exercise on the FOUS 12 Message	79-04
3/26/79	Snowcover and Cold at Portland, Me.	79-05

<u>Reg. Outlook Date</u>	<u>Title of Technical Attachment</u>	<u>T.A. No.</u>
5/29/79	Temperature Forecast Performance Comparison--Three-Hourly Temperature Forecasts vs. Max/Min Temperature Forecasts in Early FOUS 12 Output	79-09
6/11/79	An Evaluation of NMC Numerical Model Relative Humidity Forecasts	79-10
6/25/79	Satellite View of an Appalachian Squall Line	79-11
7/9/79	Thunderstorm Gusts and Low-Level Wind Shear	79-12(A)
7/9/79	Long Term Trends in the NWS Ability to Forecast Heavy Snow Events	79-12(B)
3/31/80	The Future Weather Radar: Doppler Radar	80-06
3/10/80	A Unique Characteristic of Major East Coast Snowstorms	80-05
4/21/80	New Remote Color Radar Monitors Proving to be an Important Forecast Tool	80-07
6/9/80	How to Use and Not to Use MOS Guidance	80-10
8/4/80	Use of 1800 GMT RA0B Data in a Severe Weather Situation	80-13
10/27/80	The Eastern Region Barometry Program	80-18
